And it has a wide variety of applications.By Chris PolletteHTML5 is not just another revision of HTML, but a complete standard for how Web pages work. What makes it different from previous versions?By Stephanie CrawfordWhen you use programming to tell a computer what to do, you also get to choose how it's going to be done. This is where computer algorithms come in. The relational database was created in 1970 when E.F. Codd, a researcher at IBM, wrote an article describing the process. At the time, databases were "flat", and stored as a single text file. Learn how the relational database has changed the way we work.What is this MIME thing that I sometimes see in my e-mail messages? Here's how to remove it from your computer. Removing a program from the program menu will not get rid of it. When you install a program, it leaves files all around the system. To get rid of it completely, you have to go through a disinstallation process. On Windows Windowson, you can sometimes find a uninstaller near the program in the Start menu. However, if you can't, all you have to do is:Head to Start Menu > Control Panel. Click "Uninstall a program" under the "Programs" section. From there, find the program you want to uninstall and click on it. You should see a "Dismount" button on top of the panel. Click on this, and you will open the uninstallation program. Hit later, and when it ends, the program will be completely removed from your system. On a MacOn to Mac, you can just drag a file into the trash and that program will be deleted from your car. It will leave back the preference files, though, which can be a good thing. If you ever decide to install that program again, it will keep all your settings from when you first installed it so you do not have to configure it again. If you also want to remove all system files, however, apps like AppCleaner will do it for you:After downloading AppCleaner, start and press the Applications tab. You should see a list of all your installed applications. Check the applications you want to remove and press the Search button. It should present a list containing those applications and their system files. Press the delete button to remove all those files from the system. When you're done, close AppCleaner and empty the trash.
